

TexLive Offline Installation : install a full TeX distribution on an offline computer

Install a complete (with all packages) TeX distribution on an offline computer (without Internet).

Download 2.3 GB .iso image file via TUG: Either [texlive2012.torrent](#) or directly texlive2012.iso from [one of the CTAN mirrors](#). Torrent is recommended for fast download on slow speed internet.

Later burn the .iso on DVD to install on an offline-pc or copy texlive.iso to USB drive and [mount the texlive.iso](#) on local pc to see the install-tl installer script.

To install for all users, you need to right-click install-tl.bat (Windows) or install-tl.sh (Linux and MacOS X) and select 'Run as administrator'. You will see TeX Live Lion Installer window as in [Screenshot-guide](#). Also related: [TeX Live Windows installation](#), especially section "Troubleshooting".
